

AspectJ getting it working with Eclipse

To do this use the AspectJ Development tools plugin

The examples for comp319 have been installed on Eclipse Photon (Eclipse 4.8)

The download page for AJDT is;

<https://www.eclipse.org/ajdt/downloads/>

The download page for 4.8 Eclipse is here;

AJDT - <http://download.eclipse.org/tools/ajdt/48/dev/update>

You can install all the tools on offer.

Once you have installed the tools, you can create a new AspectJ project by

New → Other → Aspect J → AspectJ project

You can then copy the source files over into the src folder of your new project

To run one of the applications, right click on the Main.java in each package and choose

Run As → AspectJ Java Application
