### Video-Based Assessment Common Guidelines

These are general guidelines for video-based assessments that are common to Assessment 2 and Assessment 3.

#### **Before you begin:**

Before you read the assignment instructions, ensure you are familiar with the Academic Integrity requirements. Refer to the information and resources available under **Assessments > Academic integrity**.

#### **Assessment tasks:**

1. Watch the “Assessment brief” video that provides a high-level overview of the assessment tasks and expectations.
2. Review the exemplar assignments found under the “Video presentation example” section of each assignment. The exemplars have similar aspects to your assessment; therefore, it should enable you to better understand its expectations. The work that you submit should be your own incorporating your own perspective and creativity.
3. Read and ensure you understand the marking rubric found under the “Marking criteria”. This document details criteria and the way each task of the assignment will be marked.
4. If in doubt about any of these, you should ask your facilitator as soon as possible before the submission.

#### **Suggested approach:**

1. Start early and have a plan.
2. Have a plan before you start recording. This will allow you to use your time efficiently. A script with a sequence of steps written down for your own reference can be extremely helpful.
3. Practice before you record the final submission.
4. Get feedback from your facilitator well before the deadline.
5. Panopto allows you edit your recording by cutting frames that are not relevant. This can help you trim down unwanted parts of the recording to fit into the required timeframe.

**Required video structure:**

- **Format:** Video recording created using Panopto.
- **Duration:** 10 minutes.

**Important to Note:**

1. Any video content exceeding the prescribed duration will NOT be assessed.
2. Student Identity Verification is mandatory. **If this cannot be made, then your demonstration will not be assessed.**
3. To ensure Student Identity Verification (SIV), you are required to record your headshot during the entire duration of the recording and show your ECU Student ID Card to the camera at the start of the recording for **five seconds** so that it can be read and verified.
4. Ensure you speak clearly in the recording.
5. Ensure everything you show and describe are clearly visible to the audience. E.g., labels on diagrams, text in tables, configuration files viewed, or commands used in the Terminal should be legible.
6. **DO NOT do a voice-over on a pre-recorded video. Your recording should be a live demonstration of you performing the activities and narrating what you are doing. A voice-over of a pre-recorded video will result in zero and may be reported as Contract Cheating.**

**Deliverable:** Video recorded using **Panopto** and submitted through **Blackboard**.

**Referencing, Plagiarism and Collusion:**

The **entirety of your assignment must be your own work** (unless the ideas are taken from sources, in which case you must reference) and produced for the current instance of the unit. Any use of unreferenced content you did not create constitutes plagiarism and is deemed an act of academic misconduct. All written assignments will be submitted to Turnitin which will match your assignment to sources including previous copies of the assignment, and the work submitted by all other students in the unit. It is also important to understand that if you have attempted this unit before you may not re-use your previous assessment work or related work from any other unit you have studied previously as this is classified as self-plagiarism.

Remember that this is an **individual** assignment. *Never give anyone any part of your assignment – even after the due date or after results have been released. Do not work together with other students on individual assignments – helping someone by explaining a concept or directing them to the relevant resources is fine, but doing the assignment for them or alongside them, or showing them your work is not appropriate.* An unacceptable level of cooperation between students on an assignment is collusion and is deemed an act of academic misconduct. If you are uncertain about plagiarism, collusion or referencing, simply contact your learning adviser and seek support.

You may be asked to **explain and demonstrate your understanding** of the work you have submitted. Your submission should accurately reflect your understanding and ability to apply the unit content.
