NEUENDORF HOUSE

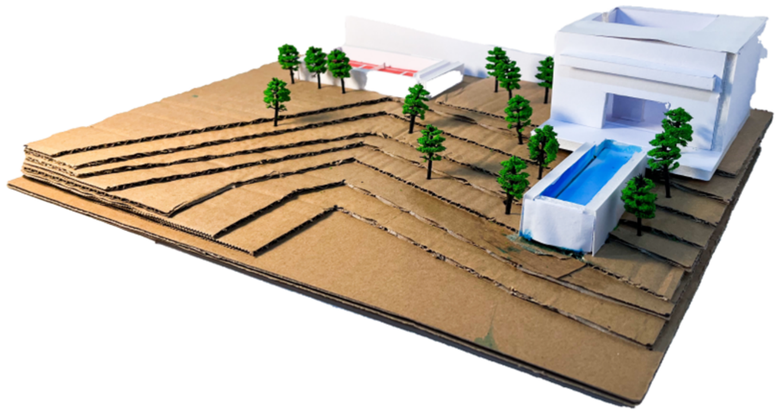

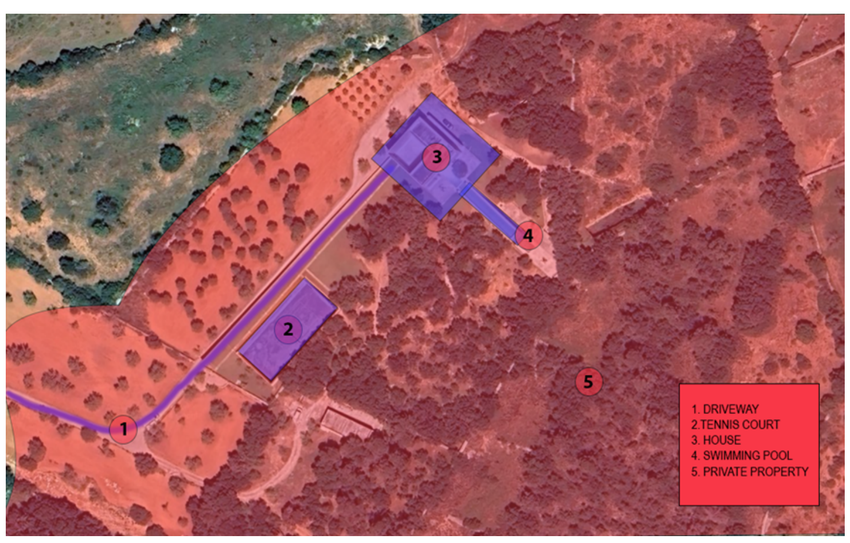

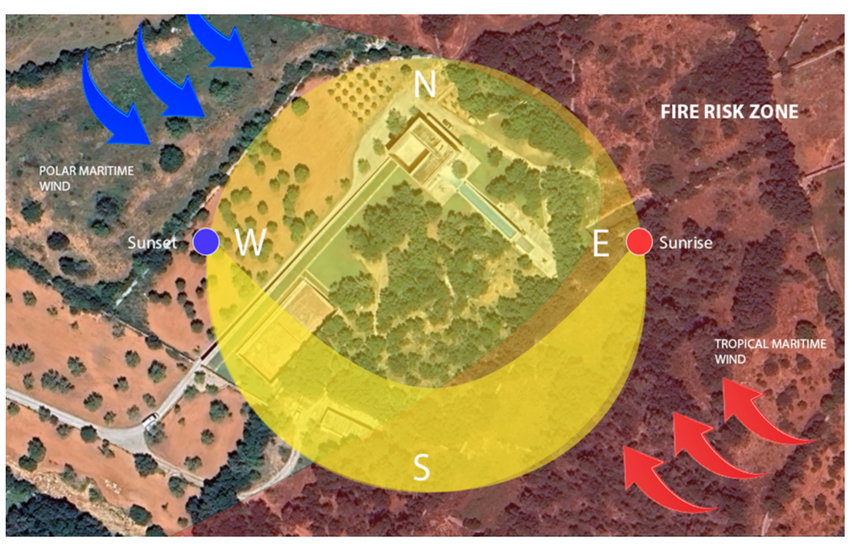

Neuendorf House, Mallorca, Spain
Built: 1991
Client: Hans & Caroline Neuendorf
Architect: John Pawson

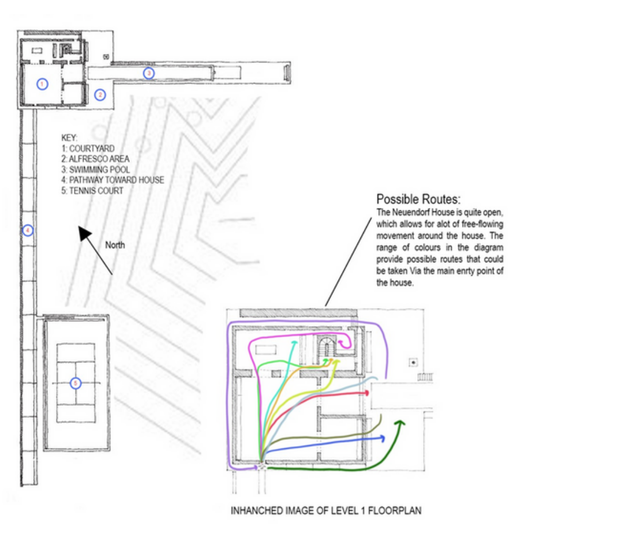

The Neuendorf House by John Pawson in Mallorca, Spain, is an example of brilliant architecture and elegance. Constructed within the country side of Mallorca the home blends in perfectly with its organic surroundings. Every area in Pawson's design is intended to stimulate imagination based on individual interests, encouraging self-discovery around the property. The home uses natural materials, embraces ecological techniques, and has an immersive outside play space. In addition to being a place to live, the Neuendorf House is a haven where guests can connect with Mallorca's natural beauty and admire the mimalistic beuty of the home.

DOMUS AUREA HOUSE

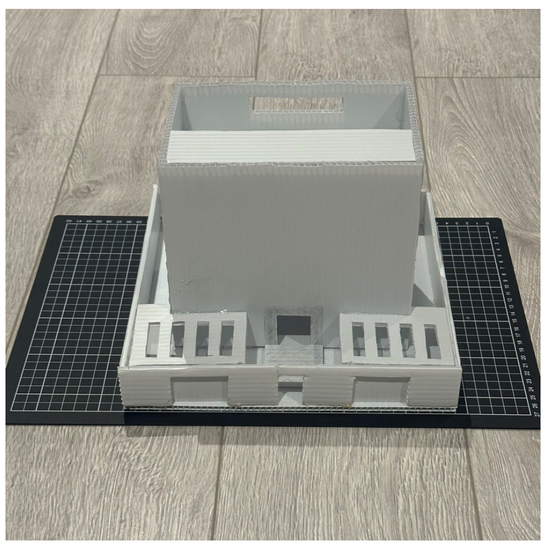

In Monterrey, Mexico
Built : 2016 by Alberto Campo Baeza

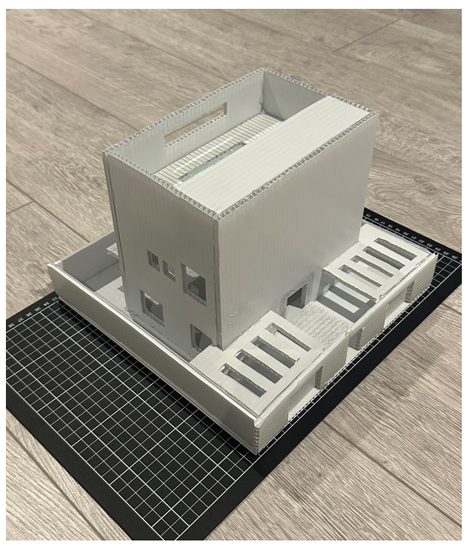

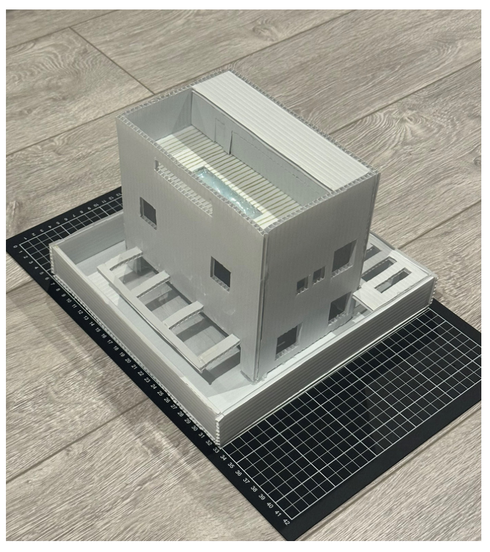

"Domus Aurea" in Monterrey, Mexico, is one beautiful example of modern architecture. Designed by the architect Alberto Campo Baeza, this minimalist house presents a perfect, harmoniously combined use of light and space. The white concrete structure contrasts with any sort of natural context, be it mountain range, sky, or temperate desert shrub, and tries to point out the peace and simplicity in the design.

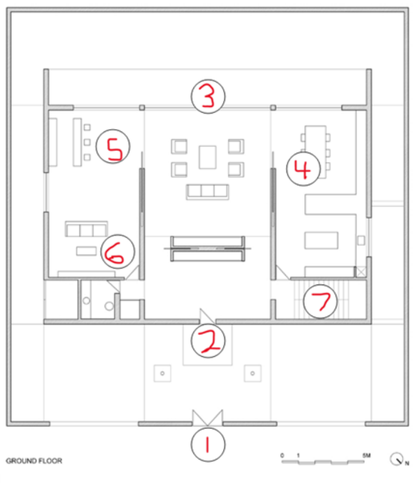

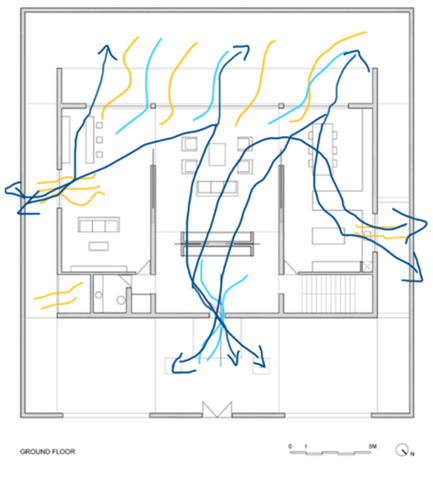

1- Front yard entrance
2- House front entrance
3- Backyard entrance to house
4- Dining room
5- Bar
6- Living room
7- Stairs

Sun path
Wind path
Ventilation

Working on the Domus Aurea Project, located in Monterrey, Mexico, had the opportunity to experience the minimalist design with simplicity, functionality, and harmony with the environment. It is from this project that one gets to realize the importance of each decision in design, merging sustainable practices into a design that oscillates between necessity and excess to make timeless and tranquil spaces that are fully functional.

VANNA VENTURI

Based in: Millman St, Philadelphia, PA 19118, USA

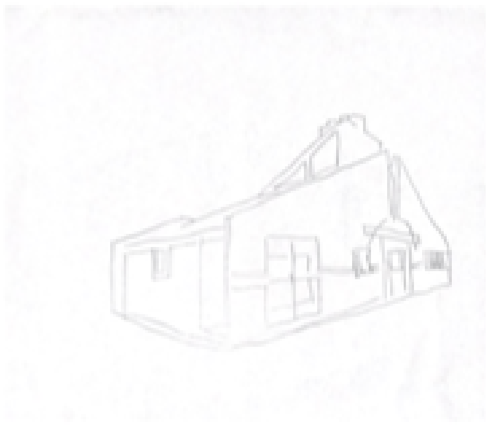

Built in: 1964

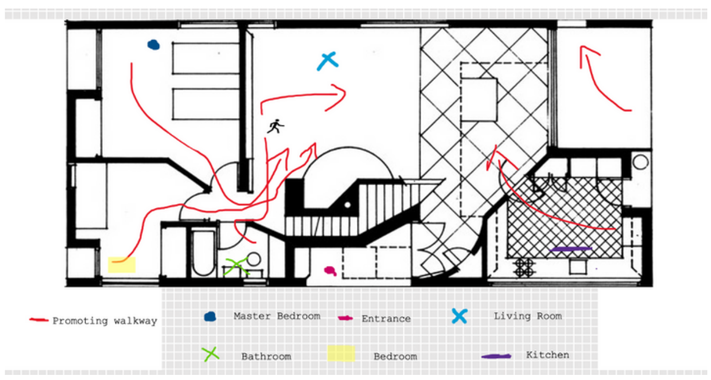

Cost: $48,000

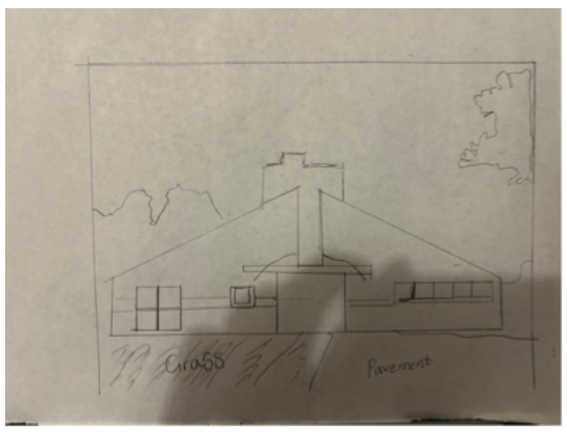

Robert Venturi's architectural marvel, the Vanna Venturi House, is proof of the transformational potential of design. What particularly appeals to me about this building, despite its legendary role in architectural history, is its capacity to create a deep feeling of tranquilly despite its intricacy.

Venturi's design ethos rejects conventional ideas of architectural purity in favour of an imaginative play with form, symbolism, and contradiction. However, despite the appearance of chaos in this arrangement of components, there is a calm and balanced aspect that is both noticeable and alluring.

The way that Vanna Venturi House blends in with its natural surroundings is one feature that greatly adds to its tranquilly. By arranging windows strategically, considering the orientation of the site, and carefully planning the landscape.

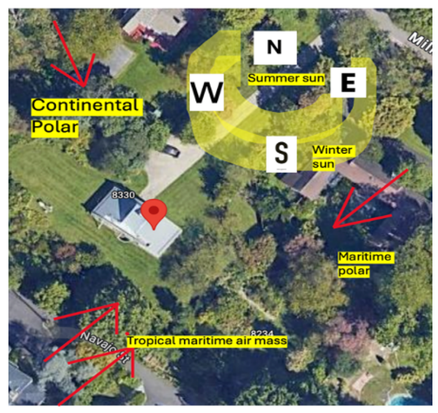

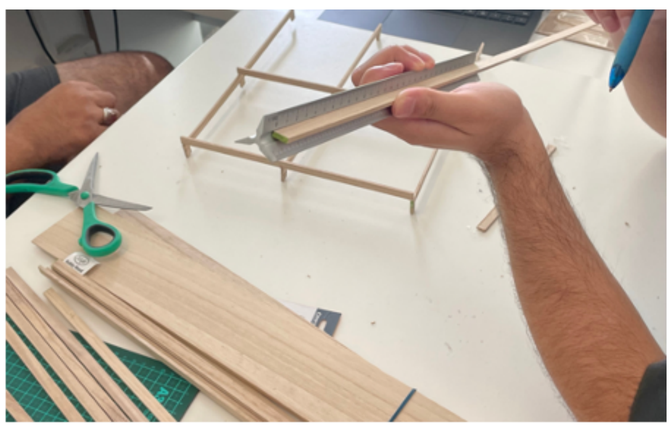

The weather regarding Philadelphia is mostly unique in its own aspect mostly the weather tends to be hot however it does have extremely cold weather during the winter, most of the time however has 3 prominent and clear air masses for the most part which are Continental Polar, Maritime Polar, Tropical Maritime air mass.

Concocting Tranquility

I chose Robert Venturi's Vanna Venturi House because of its remarkable break from traditional architectural conventions. Venturi's work encourages discussion and interpretation by embracing contradiction and complexity. A major milestone in the postmodern movement, the home questions the idea of architectural purity with its whimsical use of scale and symbolism. I'm motivated by its audacity and inventiveness to investigate novel design approaches and push the boundaries with our project.
